

# KomTrans RS232 Code Translator

***NEW --- NEW --- NEW***

**Translate up to 32 Codes**

- *Bidirectional Translation*
- *Easy to use*

Example

## KomTrans made by KOMTECH

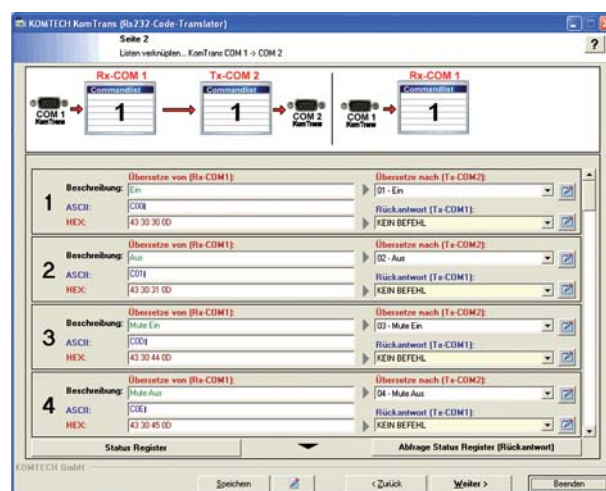

Do you know the problem – You simply want to replace a projector which is supervised by a media control system but you don't know how to program the existing media control system? The easy way to solve your problem is the KOMTECH KomTrans RS232 Code Translator.

KomTrans translates up to 32 commands of a device (for example projector, plasma, etc.) in a code of a new device. The commands are transformed similar to a dictionary. The bidirectional interface sends up to 32 commands from the new device back to the existing media control system.

If the new device cannot send commands back to the media control system, different statuses can be set to send an automatic response to the control unit. Every command can be up to 31 characters in ASCII or HEX format. A simple to use software helps you to program KomTrans in short time. KomTrans is shipped with an external power supply and two RS232 cables. The compact dimension of 94x24x56mm (WxHxD) allows to use KomTrans in almost every space. The KomTrans list price is 398,00 Euro plus VAT. For more information please visit our website [www.komtech.de](http://www.komtech.de)

### Technical Data

Baud rate:	4800, 9600, 19200, 38400 Baud
Parity:	None, Odd, Even, Mark, Space
Format:	8 Data-Bits, 1 Parity-Bit, 1 Stop-Bit
Handshake:	None, RTS/CTS
Dimension (WxHxD):	94mm x 24mm x 56mm
Power supply:	7-12V DC / 10 mA
Command Management:	32 ingoing commands per Port 32 outgoing commands per Port max. 31 characters per command
Command Syntax:	ASCII and HEX
Delivery:	230 Volt Power Supply 2 x RS232 Cables Software CD
